

VC-6000 SERIES LED REAR LIGHTS

The VC-6000 series rear lights are the ideal multifunctional LED rear lights for all your vehicles. TRALERT® offers a variant with and without a triangular reflector, allowing the VC-6000 to be fitted to all vehicles. The neon-look daytime running lights with their unique shape catch the eye. Together with the dynamic flashing light, this creates a visually attractive design. This lamp comes standard with all other functions your vehicle needs: tail light, brake light, indicator light, fog light, reverse light, licence plate light and reflector.

Connecting is easy and quick with a 7-PINs AMP connector, 8-PINs bayonet or 200cm cable. Two SuperSeal connectors can also be found at the rear of the lamp as standard. Here you will find a SuperSeal connector for blinking side lights and a SuperSeal connector for contour lights such as licence plate lights, side marker lights or marker lights.
