

Round LED driving lights with distinctive position lights.

A classic round model with a modern twist: the 5050 Series LED driving lights from TRALERT®. This series consists of three LED driving lights, with the difference being in the position lights. You can choose from a version with a stripe, a circle or both. Discover the 5050 Series on the next

The classic round LED driving light with a modern new look: that's the 5050 Series LED driving lights from TRALERT®. The distinctive round shape that has been used for years in the halogen world, but with all the advantages of LED. Better light output, lower energy consumption and, as a bonus, white position lights.

This series consists of three LED driving lights, with the difference being in the position lights. The WD-5050 has a single stripe down the middle, the WD-5051 has a circle around it, and the WD-5052 combines both. This gives you the choice, for example, of having the modern position lights of your truck continue in the stripe, or you can opt for classic round shapes that accentuate the driving light.
