

LED INTERIOR LIGHTS TRALERT® BROCHURE

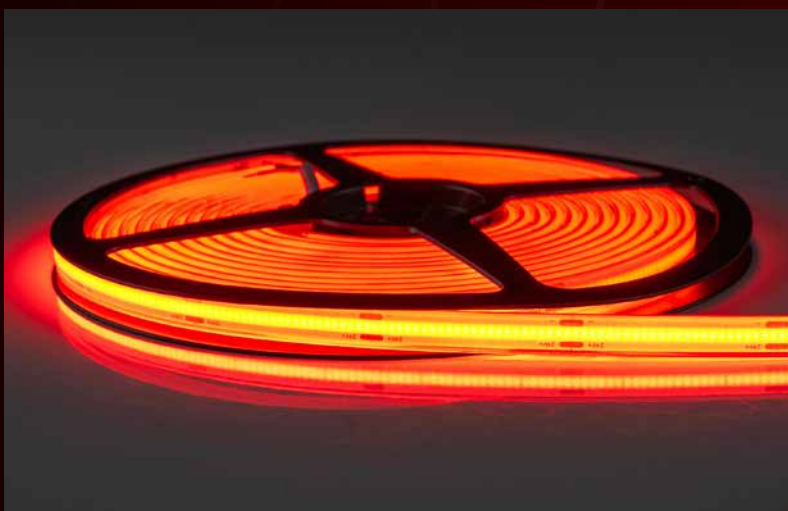

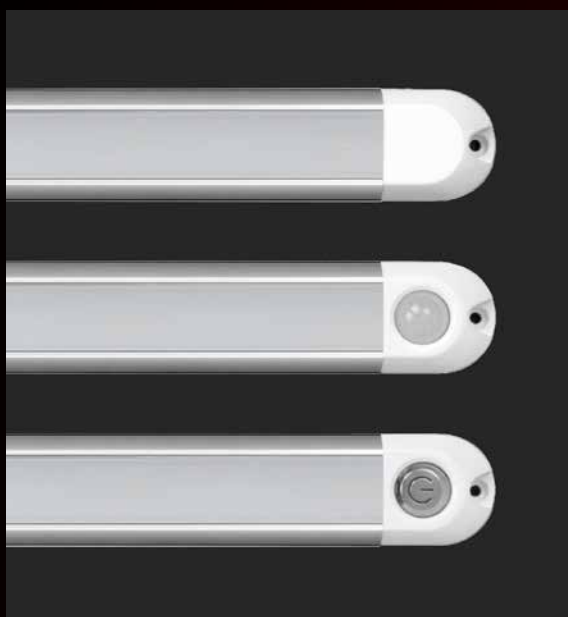

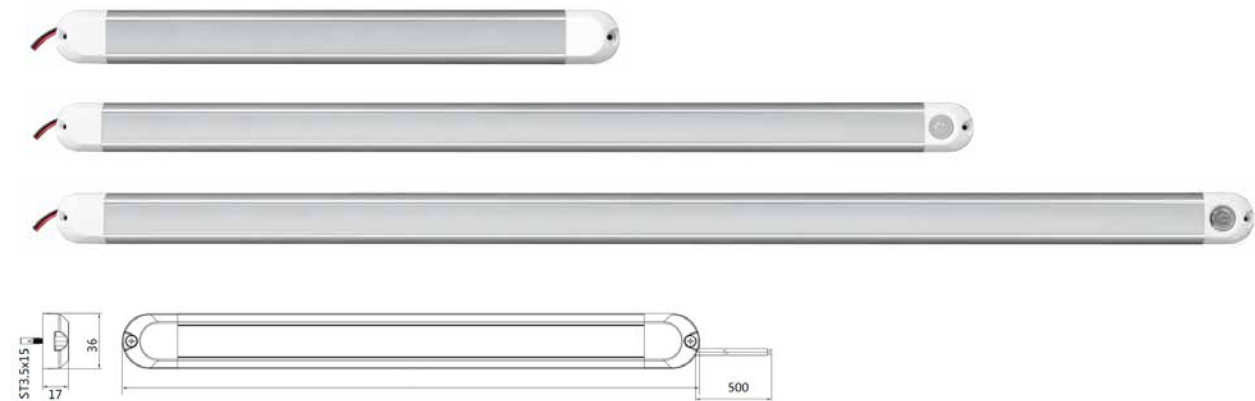

TABLE OF CONTENTS

- 4. B-2000 Series
- 5. Compact LED interior lights
- 6. Click-&-Go LED strips on roll
- 10. RGB LED strips on roll

Meet the B-2000 series of LED interior lights. This series of LED strips for your interior consists of nine products. There is a choice of three different lengths and three types of switch: with motion sensor, with touch switch and without switch.

All products in this series have the same slimline design with a thickness of only 17 mm, allowing it to blend nicely into your interior. This makes it very suitable for the interior of your commercial vehicle, among other things. Find out which variant suits your vehicle best on the following pages.

Certificates & warranty

B-2000 series product features

Connection	50cm cable	Mounting	Surface mounting
Voltage	12-24V	Dimensions	380 / 680 / 980 x 36 x 17mm
Wattage	8W / 15W / 23W	Housing colour	Light grey
Light colour	6500K	Certificates	E, CE, ECE-R10
Lumens	750 / 1500 / 2250 lumens	Warranties	3 years
IP value	IP67		

Product overview	Without switch	Motion sensor	Touch switch	380mm (8W, 750 lumens)	680mm (15W, 1500 lumens)	980mm (23W, 2250 lumens)

TRALERT® interior lighting (Art. BG-1200)

Features:

- 1200 lumens
- LED interior lights round
- 10cm cable + open wire end
- 12-24V multivoltage
- Light colour: 4000K (neutral white)
- Dimensions: ø154 x 21mm
- Without switch

TRALERT® interior lighting (Art. 148WW12)

Features:

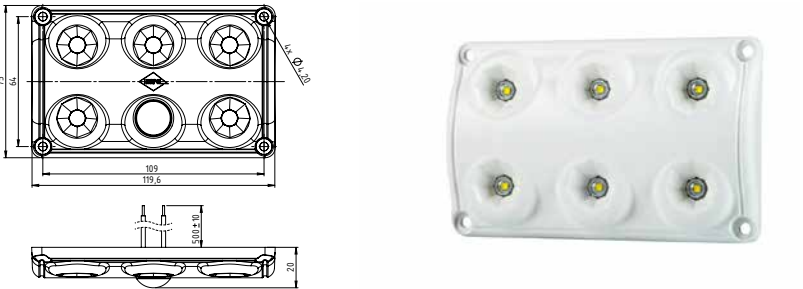

- 675 lumens
- LED interior lights rectangle
- 20cm cable + open wire end
- 12V
- Light colour: 6000K (cold white daylight)
- Dimensions: 148 x 71 x 19.5mm
- Without switch

TRALERT® interior lighting (Art. BG-1500W)

Features:

- 900 lumens
- LED interior lights rectangle
- 50cm cable + open wire end
- 12-24V
- Light colour: 5000K (white daylight)
- Dimensions: 120 x 75 x 20mm
- Without switch

The BLS-5060 series Click-&-Go LED Strip on a roll has a standard length of 5 metres, but the LED strip can be cut every 5cm. This makes it possible to tailor the strip exactly to the interior of your vehicle. Markings for this can be found on the PCB. If required, the LED strip can also be ordered in rolls of 50 metres.

The LEDs are concealed in a silicone layer, making the strip IP68 waterproof. This interior lighting is available in 12V or 24V and with neutral white light (4000K) or cold white light (6000K). Also available are several click-connectors to connect pieces and aluminium profiles to mount the strips nicely.

The BLS-50480 series is the latest addition to the interior lighting range. This series features a continuous neon-look strip for an even light image. The Click-&-Go LED Strip has a standard length of 5 metres, but can be cut every 5cm. This makes it possible to tailor the strip precisely to the interior of your vehicle. Markings for this can be found on the PCB. If desired, the LED strip can also be ordered in rolls of 50 metres.

The LEDs are concealed in a silicone layer, making the strip IP68 waterproof. This interior lighting is available in 12V or 24V and with neutral white light of 5000K or red light. Also available are several click-connectors to connect pieces and aluminium profiles to mount the strips nicely.

The BLS-50RGB series RGB LED Strip on roll is a unique interior lighting solution from TRALERT®. This is because this strip allows you to determine the colour of your interior yourself after installation. Thanks to the remote control and control unit, it is possible to set all RGB colours such as red, yellow, green and blue. This series can also be cut to the correct length to match your interior.

The strip is available in a 12V or 24V version and is made of solid black silicone. The strip is IP68 waterproof, so it can also be mounted in damp rooms. Mounting is done using clips (Art. BAC-RGBCLIP). This makes TRALERT®'s BLS-50RGB LED strip suitable for any interior.

Certificates & warranty:
